

Objectives
→

- Contribute to safety standards with digital information exchange
- Integrated solutions to foster collaboration
- API standardisation
- Implement Plug & Play principles

Challenges	Opportunities
Real-time information sharing and compliance monitoring	Direct and contactless access to real-time information
Need to adapt to business logics	Improve access to market services and platforms
Enhancing transport workers' social conditions	Increasing collaboration among stakeholders
Lack of proof for sustainability compliance	Standardizing digital data exchange in supply and logistics
Business Logics	

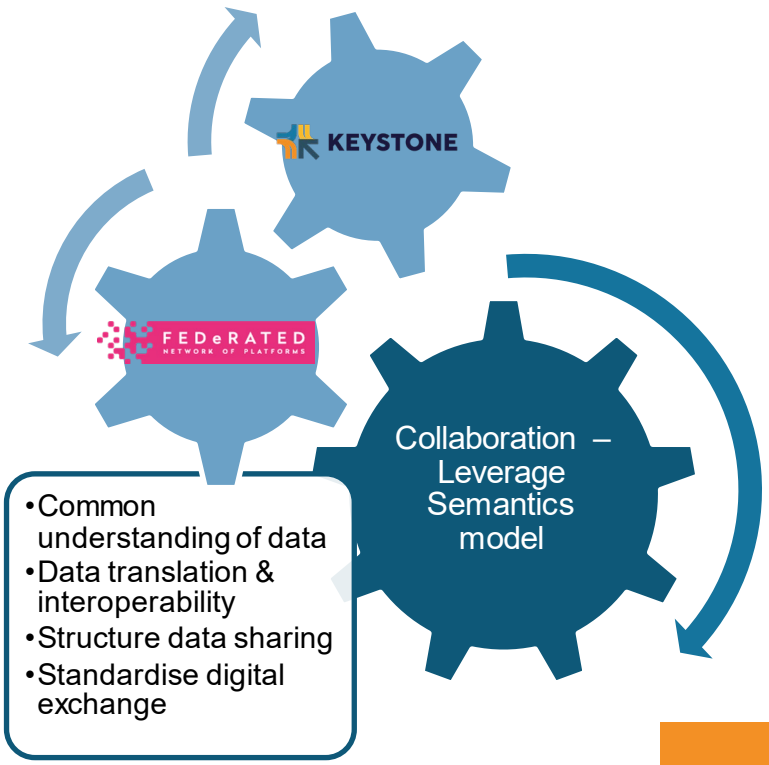

Develop tools to support the **federated operation of data sources and platforms** to automate enforcement, promote smart enforcement and allow easy compliance of stakeholders to regulations and rules.

- Smart Enforcement
- An EU-wide automated, sustainable, and cooperative enforcement system
- Compliance controls for all transport stakeholders

Solutions

- API model & Standard**
 - Agile & Standardised
 - Mechanism for implementation
 - Mechanism for standard creation
- Web App**
 - Use of API standard
 - Implementation of eFTI logic
 - Open source
- Pilots**
 - Two pilot implementations
 - Road transport logistics company
 - Intermodal hub

Let's work together!
